

# Delta MS8

## Dimpled drainage system

Delta MS8 is a preformed nodular HD polyethylene sheet designed as an underground drainage layer. Its primary use is for protection of underground walls.

### Fields of application

Delta MS8 can be installed economically on horizontal and vertical surfaces as 'permanent formwork' below floor slab, between a subterranean curtain wall and the structure etc.

The dimpled drainage system will drain the ground water and maintain a uniform hydrostatic load throughout the structure.

- Retaining walls
- Under floor slabs
- Drainage layer
- Protection of underground walls

### Features

It is pressure resistant, rot-proof and resistant to saline solutions, inorganic acids, alkalis and liquids such as alcohols, esters, ketones and similar substances.

### Presentation

Presentation	Value	Unit
Length	20	m
Width	2	m
Nodule height	7,3 ± 0,2	mm
Roll surface	40	m <sup>2</sup>

### Technical data

Physical properties	Value	Unit	Norm
N. of nodules	<1800	—	—
Compressive resistance	250	KN/m <sup>2</sup>	UNE-EN-ISO 604
Temperature range	-30 to + 70	°C	—
Air volume between nodules, approx.	5,3	l/m <sup>2</sup>	—

Specifications are subject to change without notification. Results shown are typical but reflect test procedures used. Actual field performance will depend on installation methods and site conditions.

### Safety

- No special precautions required

Version 001-201709
