

Interdek

Protective and/or isolating layer

Interdek is a locally manufactured polyester membrane embedded in an APP modified bitumen matrix. The polyester imparts high tensile strength and is resistant to tear and puncture. Interdek is not a torch applied waterproofing membrane.

Fields of application

Interdek has been designed and developed as a protective and/or isolating layer over the roofing membrane for receiving paving etc, NOT as a waterproofing membrane.

- As a nailable layer under roof sheets and roof tiles
- As a nailable underlayer on timber boarded roofs followed by Uitorch 4mm
- As a separation sheet on top of fully torched waterproofing membranes under tiles and brick paving

Features

- Extremely tear resistant
- High tensile strength

Application

- Surface preparation is of paramount importance to the success and long-life of the system. Ensure that the surface to be treated is dry and sound, free of loose, dusting, flaking particles and free from contaminants such as grease and fungus.
- **Interdek** can be loose laid or nailed using clout nails (in conjunction with flat washers).
- Laps are typically 50 mm.
- It can be cut on site with a standard cutting knife and can be spot bonded with Rubberised Bitumen.

Technical data

Physical properties	Value
Roll Length	20 meters
Roll Width	980 mm
Thickness	1, 2 mm nominal
Colour	black
Roll Weight	18 kg nominal

Specifications are subject to change without notification. Results shown are typical but reflect test procedures used. Actual field performance will depend on installation methods and site conditions.

Manufactured in SA for SA conditions

version 001-201203
